Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION III

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on February 20, 2003 has been entered.

2. Applicant's arguments with respect to claims 8 and 9 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. **Claims 8, 10, 12, and 14 are rejected under 35 U.S.C. 102(b) as being anticipated by Kaneko et al. (U.S. Patent No. 5,633,680).** The Kaneko reference has already been supplied to the applicant in the first office action mailed on March 29, 2002.

5. Regarding *claim 8*, Kaneko discloses a rotary operation member (4) for inputting a moving amount of a lens, an output signal characteristics converting means (8) for converting a rotating amount of the rotary member (4) into an amount of movement variation of the control

Art Unit: 2612

data of the position of a lens, and mode selector means (19) for selecting a mode for operating the lens adjusting apparatus. This mode selector means (19) changes the output signal characteristics converting means to implement a different method of moving the lens to a desired position. See column 3, lines 54-59 and column 4, lines 30-60. Therefore, the mode selector acts as the conversion characteristic changing means.

6. As for *claim 10*, Kaneko discloses that the lens is a focusing lens (col. 3, line 11) which is disposed in a television camera (col. 1, line 16).

7. Regarding *claim 12*, Kaneko discloses a television camera (col. 1, line 16) with a means for controlling a lens apparatus within the television camera. Kaneko discloses a rotary operation member (4) for inputting a moving amount of a lens, an output signal characteristics converting means (8) for converting a rotating amount of the rotary member (4) into an amount of movement variation of the control data of the position of a lens, and mode selector means (19) for selecting a mode for operating the lens adjusting apparatus. This mode selector means (19) changes the output signal characteristics converting means to implement a different method of moving the lens to a desired position. See column 3, lines 54-59 and column 4, lines 30-60. Therefore, the mode selector acts as the conversion characteristic changing means.

8. With regard to *claim 14*, Kaneko discloses a television camera (col. 1, line 16) with a means for controlling a focusing lens (col. 3, line 11) apparatus within the television camera. Kaneko discloses a rotary operation member (4) for inputting a moving amount of a lens, an output signal characteristics converting means (8) for converting a rotating amount of the rotary member (4) into an amount of movement variation of the control data of the position of a lens, and mode selector means (19) for selecting a mode for operating the lens adjusting apparatus.

Art Unit: 2612

This mode selector means (19) changes the output signal characteristics converting means to implement a different method of moving the lens to a desired position. See column 3, lines 54-59 and column 4, lines 30-60. Therefore, the mode selector acts as the conversion characteristic changing means.

Allowable Subject Matter

9. Claims 9, 11, 13, and 15 are allowed.

Regarding *claims 9, 13, and 15*, the primary reason for indication of allowable subject matter is that the prior art fails to teach or reasonably suggest correcting the reference data of the amount of variation of conversion characteristic mode when a different mode is detected based on the control data of the previous sampling.
